

Instructions

INSTRUCTION

You will be provided with two different sets of statements.

One is referred to as "**Reference Statements**", and the other is referred to as "**Target Statements**". Your job is assess whether if the content in each Reference Statement is present in the Target Statements. Note that some Target Statements may not include any content from the Reference Statements.

Please carefully read the detailed guideline below.

Detailed Steps

1. Review the Reference Statement: Begin by carefully reading the Reference Statement provided on the left side of the screen.
2. Evaluate the Target Statements: Compare the Reference Statement to each Target Statement displayed on the right. Determine if the content of the Reference Statement is present in any Target Statement.

How to Deal with Borderline Cases?

In this task, **if the content of a Reference Statement is included in a Target Statement either directly, indirectly, or by paraphrasing**, you should consider it present in the Target Statement. Below are some additional rules to be followed.

- **The content of the Reference Statement itself** should be directly or implicitly included in the Target Statement, though the wording may differ. Therefore, if the content of the Target Statement is based on the causal inference using the content of the Reference Statement, you should **not** conclude that the content of the Reference Statement is present.
- If the Target Statement merely uses some words from the Reference Statement without addressing the same issues, you should **not** conclude that the Reference Statement is present in the Target Statement. For example, the mere appearance of the same person's name in both statements does not necessarily indicate that the content of the Reference Statement is reflected in the Target Statement.
- You should not use common sense or knowledge outside the given Reference Statement and Target Statement.
- You should consider the Reference Statement as present in the Target Statement even if there are minor contradictions in details, such as numbers or names, as long as the underlying contents are directly connected.

NOTICE

- There are various topics for the statements, including dialogues, news articles, medical articles, informative articles, meeting transcripts, and so on.
- **IMPORTANT:** We have included some questions that can be used to evaluate the faithfulness of your work. If you fail to get correct answers for those questions, it will result in the rejection of your submission.

Progress Bar

Reference Statement

Reference Statement #1

Marouane Fellaini shared a glass of bubbly with his twin brother Mansour after a match.
